

I'm not robot!

What is Management? • Planning, control, and administration of an organization. • Management is generally hierarchical: • Top managers handle planning. • Mid-career managers control. • And, junior managers administer. • Processed data to support management functions • Processing -record, summarize, store, and retrieve. • Present in the required reporting format. • Facilitates analysis of problems. • Provides deep insight into complex subjects. • Supports creation of new products. • Input, processing, and output, and a feedback system • Input -captures or collects raw data • Processing -converts raw input into a meaningful form. • Output -transfers the processed information to the users. • The feedback is output returned by the users. • Feedbacks supports evaluation at the input stage. Meaning of MIS ... 7.1.6.2. Components of IS • An IS focuses on the organization and its environment. • IS captures all the stakeholders -customers, suppliers, etc. • Regulatory agencies also interact in the IS of firms. • Technically, IS are IT-based information systems. • Computers store and process information. • Computers are only part of an IS. • Computer programs, or software, support processing. • Software are sets of operating instructions. • Knowing how computer programs work is vital. • Receives different types and magnitudes of data: • like text documents, numerical data, photos, etc. • Concurrency: • supports simultaneous use without deadlocks. • Consistency of the data despite multiple use. • Security: • Has access rights for users and safety of database. • ES are packaged enterprise application software (PEAS) systems. • ESs have process orientation including: • Enterprise resource planning (ERP); • Customer Relationship Management (CRM); • Supply Chain Management (SCM). • The distinction between ES and IS: • ES refers to software, whereas an IS is a social system that uses IT. • An IS includes people and IT. • The management of a network of interconnected businesses. • Network involved in the provision of products and services. 5. Business Process Integration .1. • The end-points of SCM are the end-customers. • SCM spans all movement and storage of the following: • Raw materials, • work-in-process inventory, • and finished goods • The supply chain is from the origin to point of consumption. • More firms now need supply chains to connect global markets. • Traditionally, firms focuses on the inputs and outputs processes. • With little concern for how other individual players worked. • But linkages within the supply chain network is growing. • Six major eras are observable in the evolution of SCM studies: • Creation, Integration, and Globalization; • And, specialization Phases One and Two, and SCM 2.0. • SCM was used by a US industry consultant in the early 1980s. • But the notion of a supply chain existed since the early 20th century. • The early focus was in manufacturing assembly line. b. Integration Era • The development of Electronic Data Interchange (EDI) systems. • The introduction of Enterprise Resource Planning (ERP) systems. • increasing value-adding and cost reductions through integration. • Although the use of global sources in SCM is traceable to the 1940s. • However, by late 1980s more firms were integrate globally. • The goal is to increase competitive advantage, through: • Value addition; • And, reducing costs through global sourcing. • Companies abandoned vertical integration. • Many firms close non-core operations, • Outsourcing is preferred to having diverse support units. • Specialization within the supply chain led to the growth of: • Transportation brokerages, • Warehouse management, • And, non-asset-based carriers • SCM goes beyond transportation and logistics. • SCM increasingly involves the following: • supply planning, • collaboration, • execution and performance management. • Organizations have delivery options that produces speedy results. • The speed of supply chain increases due to global competition. • Short product life cycles and expanded specialization. • Change from managing individual functions to supply chain processes. • Collaborative work between buyers and suppliers. • Joint product development. • Common systems and shared information. • Integrated supply chain requires a continuous information flow. • Dominance of a process approach to the business. • Change from managing individual functions to supply chain processes. • Collaborative work between buyers and suppliers. • Joint product development. • Common systems and shared information. • Integrated supply chain requires a continuous information flow. • Dominance of a process approach to the business.
